Fund Manager: Mark Barnett

Key facts

Fund Manager	Mark Barnett
Launch date	1 October 1991
Fund size	£265.99m
Benchmark/Index	FTSE All-Share Index

Market commentary

The UK equity market provided a positive return during the first quarter of 2019, regaining much of the ground lost in the final three months of 2018. Sterling strengthened against international currencies over the quarter, peaking at US\$1.33 and EUR1.17 in March, as the UK secured an extension to Article 50, avoiding a no-deal exit from the European Union. The political impasse continued in to quarter end.

Amid this continued political uncertainty, the Bank of England cut its UK growth forecast from 1.7% to 1.2% for the year. However, the Chancellor of the Exchequer's Spring Statement in March highlighted that the UK economy has been "remarkably robust" since the EU Referendum result.

The portfolio benefited from a number of holdings over the period including AJ Bell. The investment platform continued to trade well following its initial public offering in December 2018. Meanwhile, retailer Next also provided a positive return over the quarter, buoyed by the release of full year results that were in line with market expectations.

Conversely the portfolio's holding in Motif Bio provided a negative return during the first quarter. The company's antibiotic iclaprim did not receive the anticipated approval from the US Food & Drug Administration (FDA). Discussions between the company and the FDA remain ongoing.

The portfolio manager believes that the negative sentiment towards sterling and domestic companies since the EU Referendum will continue to unwind and has selectively increased the fund's UK domestic exposure. The manager remains convinced that, in a changing global environment, the interests of investors are best served by employing a well-tested investment process which is based on fundamental company analysis and a prudent approach to valuation.

Investment objective

The fund aims to achieve capital growth by investing primarily in a portfolio of companies in the UK, with the balance invested in global equities.

General Risk Factors

You should consider the following general risk factors before investing in the Plan.

Depository Risk

The assets owned by each fund are held on trust for the fund by a custodian that is also regulated by the Financial Conduct Authority. The Financial Conduct Authority requires that the depository ensures that there is legal separation of non-cash assets held under custody and that records are maintained that clearly identify the nature and amount of all assets under custody, the ownership of each asset and where the documents of title to that asset are located. In case of a potential bankruptcy of the depository, cash positions in the fund are not protected and there may be a delay in regaining full control of the non-cash assets.

Market Risk

An investment in one or more of the funds will involve exposure to those risks normally associated with investment in stocks and shares such as general economic conditions, market events and the performance of the underlying investments. As such, the price of shares and the income from them can go down as well as up and an investor may not get back the full amount invested. There is no assurance that the investment objectives of any fund will actually be achieved.

Market Suspension Risk

A fund may invest in securities dealt on a market or exchange. Trading on a market or exchange may be halted or suspended due to market conditions, technical problems or other events and, during such circumstances, the fund will not be able to sell the securities traded on that market until trading resumes.

Further, trading of the securities of a specific issuer may be suspended by a market due to circumstances relating to the issuer. If trading of a particular security is halted or suspended, the relevant fund will not be able to sell that security until trading resumes.

Fund Suspension Risk

Investors should be aware that dealing in the shares can be suspended in fund(s) in exceptional circumstances. More information on this can be found in the Terms and Conditions.

Market Liquidity Risk

A fund may be affected by a decrease in market liquidity for the securities in which it invests which may mean that shares in those securities may not be sold at their true value.

Termination Risk

A fund may be terminated under certain conditions and in the manner specified in the Terms and Conditions. It is possible that at the time of such termination, certain investments may be worth less than their acquisition cost, resulting in investors having to realise an investment loss and/or being unable to recover an amount equal to their original capital invested.

Currency Exchange Risk

A fund's assets may be invested in securities denominated in currencies other than Pound Sterling. Changes in exchange rates may adversely affect the value of any investment, which will have a related effect on the price of shares.

Investing in Assets Traded on Non-Eligible Markets

The funds are permitted to invest up to 10% of assets traded on markets which may not meet the criteria in the FCA Rules to be considered eligible and therefore may not be regulated. Investors should be aware that these markets may not be regulated and there may be problems with liquidity, repatriation of assets or custody of assets. Where appropriate, the funds may also hold assets which are not traded on any market and the same risks apply, with additional risks linked to concentrated ownership and greater fluctuations in the value of the fund.

Counterparty Risk

The funds may enter into derivatives transactions or place cash in bank deposit accounts, which would expose the funds to the credit of its counterparties and their ability to satisfy the terms of such contracts. In the event of a bankruptcy or insolvency of a counterparty, the funds could experience delays in liquidating positions and significant losses, including declines in the value of investments during the period in which a fund seeks to enforce its rights, inability to realise any gains on its investments during such period and fees and expenses incurred in enforcing its rights.

Use of Warrants

The funds may invest in warrants. Warrants are instruments where the price, performance and liquidity are linked to that of an underlying security. However, the warrants market is generally more volatile and there may be more fluctuations in the price of the warrant than in the underlying security.

Use of Financial Derivative Instruments for Efficient Portfolio Management

All funds may make use of derivatives for efficient portfolio management ("EPM"). These techniques aim to reduce risk and/or costs in the funds, or produce additional capital or income in the funds. It is not intended that using derivatives for EPM will increase the volatility of the funds. In adverse situations, however, a fund's use of derivatives for EPM may become ineffective and a fund may suffer significant loss as a result. A fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations. It is not intended that the use of derivatives for EPM within a fund will materially alter the overall risk profile of the fund.

Any income or capital generated by EPM techniques will be paid to the relevant fund.

In addition to using derivatives for EPM, a fund may also use derivatives for investment purposes where stated in its investment objective.

Performance and portfolio data as at 31 March 2019. Performance figures are total returns, denominated in sterling, net of fees. The returns are calculated using the quoted dealing prices. A single swinging price is determined according to net cash flows. Returns are net of the annual management charge payable in respect of the retail share class of 1.25% (source: Invesco).

Invesco UK Equity Pension Fund

As at 31 March 2019

Investment risks

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

Where FTSE sector breakdown categories are provided, the Industry Classification Benchmark is a joint product of FTSE International Limited and Dow Jones & Company, Inc. and has been licensed for use.

The investment exposure offered by the fund was previously available through a unit trust, the UK Exempt Fund, which was wound up on 31 January 1999 and converted to a pension fund. Fund performance prior to that date was subject to unit trust taxation and charging structures.

Investing in Equity Securities

Investing in equity securities involves risks associated with the unpredictable drops in a stock's value or periods of below-average performance in a given stock or in the stock market as a whole. Share prices on equity markets may fluctuate. Such fluctuations, or volatility, have historically been much greater for equity markets than the volatility of fixed income markets.

Investing in Private and Unlisted Equity

The funds have the ability to invest up to 10% of the fund in private and unlisted equities. In addition to typical equity investment risks, there may also be some additional specific risks, including: lack of liquidity which could impact the fund's ability to sell such investments at their true value, or in a timely manner; lack of pricing transparency; and less readily available information on the company. Ownership may be highly concentrated and certain company action may be driven by these majority owners.

Important information

Where individuals or the business have expressed opinions, they are based on current market conditions, they may differ from those of other investment professionals and are subject to change without notice.
