

Invesco Fixed Interest Pension Fund

As at 31 March 2020

Fund Manager: Michael Matthews

Key facts

Fund Manager	Michael Matthews
Launch date	1 February 1999
Fund size	£43.38m
Benchmark/Index	ABI UK Pension Fund UK Fixed Interest Sector Index

Market commentary

The first 3-months of 2020 were dominated by events in March. Specifically, the ongoing spread of the covid-19 virus and the economic impact of the measures being taken to fight it. By end of the quarter, most countries across the world had introduced some form of lockdown on their populations. As a result, economic activity has been significantly curtailed and many companies are now shuttered. Against this backdrop, corporate bonds have experienced significant price falls. The premium over government bonds that companies need to pay to borrow in sterling is now at its highest level since the Eurozone sovereign debt crisis in 2012.

The financial sector remains the fund's largest sectoral allocation. The two largest non-financial exposures are currently utility and telecoms. The fund's Interest rate sensitivity (modified duration) of 6 remains low relative to the broader sterling corporate bond market, which typically has duration of around 8.5. As at 31 December 2019, around 15% of the fund was held in US dollar denominated bonds. The majority of the currency exposure from these positions is hedged back to sterling.

Investment objective

The objective of the Fund is to achieve income and capital growth over the medium to long term (3 to 5 years plus).

The Fund invests at least 80% of its assets in UK debt securities.

The Fund may use derivatives (complex instruments) to manage the portfolio more efficiently, with the aim of reducing risk, reducing costs and/or generating additional capital or income.

General Risk Factors

You should consider the following general risk factors before investing in the Plan.

Depository Risk

The assets owned by each fund are held on trust for the fund by a custodian that is also regulated by the Financial Conduct Authority. The Financial Conduct Authority requires that the depository ensures that there is legal separation of non-cash assets held under custody and that records are maintained that clearly identify the nature and amount of all assets under custody, the ownership of each asset and where the documents of title to that asset are located. In case of a potential bankruptcy of the depository, cash positions in the fund are not protected and there may be a delay in regaining full control of the non-cash assets.

Market Risk

An investment in one or more of the funds will involve exposure to those risks normally associated with investment in stocks and shares such as general economic conditions, market events and the performance of the underlying investments. As such, the price of shares and the income from them can go down as well as up and an investor may not get back the full amount invested. There is no assurance that the investment objectives of any fund will actually be achieved.

Market Suspension Risk

A fund may invest in securities dealt on a market or exchange. Trading on a market or exchange may be halted or suspended due to market conditions, technical problems or other events and, during such circumstances, the fund will not be able to sell the securities traded on that market until trading resumes.

Further, trading of the securities of a specific issuer may be suspended by a market due to circumstances relating to the issuer. If trading of a particular security is halted or suspended, the relevant fund will not be able to sell that security until trading resumes.

Fund Suspension Risk

Investors should be aware that dealing in the shares can be suspended in fund(s) in exceptional circumstances. More information on this can be found in the Terms and Conditions.

Market Liquidity Risk

A fund may be affected by a decrease in market liquidity for the securities in which it invests which may mean that shares in those securities may not be sold at their true value.

Termination Risk

A fund may be terminated under certain conditions and in the manner specified in the Terms and Conditions. It is possible that at the time of such termination, certain investments may be worth less than their acquisition cost, resulting in investors having to realise an investment loss and/or being unable to recover an amount equal to their original capital invested.

Currency Exchange Risk

A fund's assets may be invested in securities denominated in currencies other than Pound Sterling. Changes in exchange rates may adversely affect the value of any investment, which will have a related effect on the price of shares.

Investing in Assets Traded on Non-Eligible Markets

The funds are permitted to invest up to 10% of assets traded on markets which may not meet the criteria in the FCA Rules to be considered eligible and therefore may not be regulated. Investors should be aware that these markets may not be regulated and there may be problems with liquidity, repatriation of assets or custody of assets. Where appropriate, the funds may also hold assets which are not traded on any market and the same risks apply, with additional risks linked to concentrated ownership and greater fluctuations in the value of the fund.

Counterparty Risk

The funds may enter into derivatives transactions or place cash in bank deposit accounts, which would expose the funds to the credit of its counterparties and their ability to satisfy the terms of such contracts. In the event of a bankruptcy or insolvency of a counterparty, the funds could experience delays in liquidating positions and significant losses, including declines in the value of investments during the period in which a fund seeks to enforce its rights, inability to realise any gains on its investments during such period and fees and expenses incurred in enforcing its rights.

Use of Warrants

The funds may invest in warrants. Warrants are instruments where the price, performance and liquidity are linked to that of an underlying security. However, the warrants market is generally more volatile and there may be more fluctuations in the price of the warrant than in the underlying security.

Use of Financial Derivative Instruments for Efficient Portfolio Management

All funds may make use of derivatives for efficient portfolio management ("EPM"). These techniques aim to reduce risk and/or costs in the funds, or produce additional capital or income in the funds. It is not intended that using derivatives for EPM will increase the volatility of the funds. In adverse situations, however, a fund's use of derivatives for EPM may become ineffective and a fund may suffer significant loss as a result. A fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations. It is not intended that the use of derivatives for EPM within a fund will materially alter the overall risk profile of the fund.

Any income or capital generated by EPM techniques will be paid to the relevant fund.

In addition to using derivatives for EPM, a fund may also use derivatives for investment purposes where stated in its investment objective.

Performance and portfolio data as at 31 March 2020. Performance figures are total returns, denominated in sterling, net of fees. The returns are calculated using the quoted dealing prices. A single swinging price is determined according to net cash flows. Returns are net of the annual management charge payable in respect of the retail share class of 1.0% (source: Invesco).

Invesco Fixed Interest Pension Fund

As at 31 March 2020

Investment risks

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

Investing in Fixed Interest Securities

The following is a brief summary of some of the more common risks associated with funds that invest in fixed interest securities:

- **Interest Rate Risk** - Funds that invest in bonds or other fixed income securities may be impacted by interest rate changes. The level of income received from fixed income securities may be reduced in periods of low interest rates. Generally, the prices of debt securities rise when interest rates fall, while the prices fall when interest rates rise. Longer term debt securities are usually more sensitive to interest rate changes.
- **Market Liquidity Risk** - A fund may be adversely affected by market conditions such as a decrease in market liquidity which may mean that it is not easy to buy or sell securities. A fund's ability to acquire or to dispose of securities at their intrinsic value may also be affected.
- **Issuer Risk** - A fund that invests in bonds and other fixed income securities is subject to the risk that issuers do not make payments on such securities. A lowering of the credit rating of the issuer of a bond or of the bond itself may cause volatility in the price or reduce the security's liquidity, making it more difficult to sell. Funds investing in lower quality debt securities are more susceptible to these problems and their value may be more volatile.

Government and public debt securities

Funds may invest over 35% of their value in government and public securities issued by a single body and up to 30% in one single issue. If one of these investments declines in value, this can reduce the fund's value more than if it held a larger number of investments.

Investing in High Yield Bonds

Where a fund's investment policy is to invest in higher risk fixed interest securities, many of the investments will be in "below investment grade" securities (generally defined as below BBB- by leading rating agencies). Investment in such securities brings an increased risk of default on repayment and therefore increases the risk that the income and capital of the fund will be affected.

As a general rule, fixed interest securities with an above average yield tend to be less liquid than securities issued by issuers with a higher investment grade. Furthermore, the solvency of issuers of such fixed interest securities may not be guaranteed in respect of either the principal claim or regarding the interest payments and it may not be excluded that such issuers may become insolvent.

Important information

Where individuals or the business have expressed opinions, they are based on current market conditions, they may differ from those of other investment professionals and are subject to change without notice.
